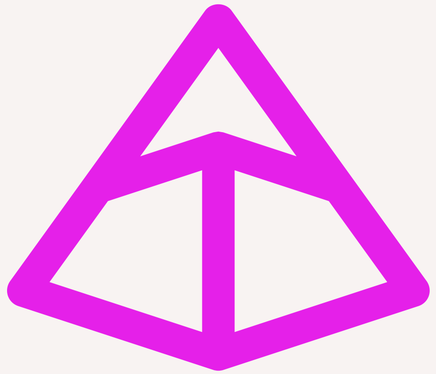
1.1 Logo

Logomark

Introducing our logomark, a fusion of Penrose tiling shapes - darts and kites. Representing our commitment to empowering developers, it exudes creativity, precision, and efficiency.

With clean lines and harmonious angles, it embodies modernity and sophistication.

This dynamic composition symbolizes our innovative solutions, pushing boundaries in the developer tools industry. Resonating with our passion and future-forward approach, our logomark redefines the landscape of development tools.



The logotype, composed in **Acumin Variable Concept Bold**, is generally not used withouth the logomark.

The letters' relative positions have been optically adjusted to ensure the best balance between positive and negative spaces.

For this reason it is strongly recommended to use the logotype instead of typing out the name of the company, unless dealing with live text paragraphs.

Pydantic

The harmonious alignment and proportional balance of the lockup enhance its visual impact, creating a cohesive and memorable representation of our brand.

This lockup embodies the synergy between our visual elements, embodying our forward-thinking ethos and leaving a lasting impression on our audience.

Pydantic

1.1 Logo

Clearance

Maintaining the integrity of our brand, we establish a dedicated clearance zone around our logomark.

The clearance is defined as the minimum space equivalent to the width and height of the logomark, ensuring optimal visibility and impact.

This generous buffer surrounding the logomark guarantees that it remains visually distinct and uncluttered, allowing it to command attention in various applications.

Color Variations: Monochromatic Light

Whenever possible, we highly recommend utilizing the main versions of our logo. By using the main version, we ensure consistency and maximize the impact of our visual identity.

However, we also understand the need for versatility, which is why we offer monochromatic color variations.

3.1 Typography

IBM Plex Mono

In catering to our developer-centric focus, we introduce IBM Plex Mono as our accent typeface, specifically designed for titles, special information, and code snippets.

IBM Plex Mono, with its monospaced structure, provides optimal readability and consistency, crucial for conveying code and technical content accurately.

This versatile typeface complements **IBM Plex Sans**, our primary font, seamlessly, adding a touch of distinction and emphasizing the importance of code-related elements within our brand communications.
